

HIX Digital R2R

Speed, durability and ease of use separate the HIX Digital R2R from all other roll label transfer presses. Designed specifically for high production application of tagless care labels with transfer times quick as one second on a variety of fabrics. Short web paths, toolless web guides and quick release lower platens decrease change-over times and eliminate excessive waste. User friendly machine controls, and a multi color index reader insure precise label placement. The HIX R2R easy load system requires no tools, sensor adjustment is simple and capable of reading either side of the transfer roll. The reader is programmable to detect virtually all colors in the spectrum in one quick step. Digital controls guarantee precise heat and time control, the core-less take up reel makes discarding spent roll stock quick and easy with no need for tape or spare cores. When your application requires the use of a shaped die the quick change over lower pad eliminates the handling of hot castings. The HIX R2R is the perfect solution for your tagless applications.

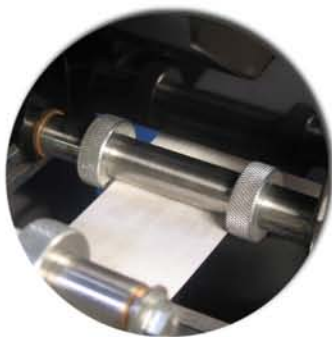

removable drive roller and core-less take up cassette reduces set up time and increases production.
